

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES
BIÑAN CAMPUS

COMP010

Final Group Requirement

Information Management

2nd Semester 2025 - 2026

Mc Joben R. Reyes, LPT, DIT (Cand.)

College of Information Technology and Engineering

Project Background

For your final requirement, you will design and create a comprehensive database that will serve as the data repository for your proposed system in your Web Development course. Your group should be able to comply with the requirements listed below:

Database and EER Requirements

The database should have the following:

- The database is strictly aligned and should be connected to your Web Development project.
- Entities (e.g., foreign and main) should contain actual data (can be inputted through your system or inserted into the backend manually).

Project Background

Database and EER Requirements

The database should have the following:

- All entities should have a unique key and have multiple keys that will connect their data.
- Create an EER database model using MySQL.
- Complete your data dictionary.
 - Data Dictionary Template can be accessed here:
<https://docs.google.com/spreadsheets/COMP010DataDictionary>.

Submission of Requirements

The following files should be submitted via the submission bin to be posted in the Google Classroom:

1. Extracted Database from MySQL.
2. PDF copy of your Enhanced Entity Relationship Diagram from MySQL.
3. Complete Data Dictionary (template already included in the previous slide).

Project Rubrics

You will be graded by the following [Total: 100%]:

Database (50%)

Database Design (40%)

EER Database Model (30%)

Data Dictionary (30%)

Self and Peer Evaluation (50%)
